

ORALITE V98 Conformable Graphic Sheeting

V98-11275-02015

Description

ORALITE® V98 Conformable Graphic Sheeting is a tough weather and solvent resistant microprismatic retroreflective product designed for rugged outdoor use for vehicles that require increased visibility such as fire, EMS, police, utility, telecom and DOT. The material is die cuttable and plotter cuttable, and easy to apply to smooth painted or unpainted vehicle surfaces. The single layer product does not require edge sealing, and is designed to be applicator friendly due to the potential to template fewer pieces than other prismatic graphic films. ORALITE® V98 meets/exceeds the requirements of NFPA 1901.

Features and Benefits

- Repositionable adhesive, ease of application
- Superior conformability, perfect for complex curves, rivets and corrugations
- Prismatic retroreflective performance, enhanced long distance visibility
- Mono-layered construction, no edge sealing required, withstands high pressure washing, resists edge lift
- Exceptional impact resistance, maintains reflectivity after impact,
- Specification compliant, meets requirements for: ASTM D4956 NFPA 1901

Product Construction

ORALITE® V98 Conformable Graphic Sheeting is composed of cube corner (microprism) retroreflective elements integrally bonded to a flexible, smooth-surfaced, tough and weather-resistant UV stabilized polymeric film. The prism surfaces are coated with a vacuum deposition of aluminum to provide a mirror surface to the prism facets.

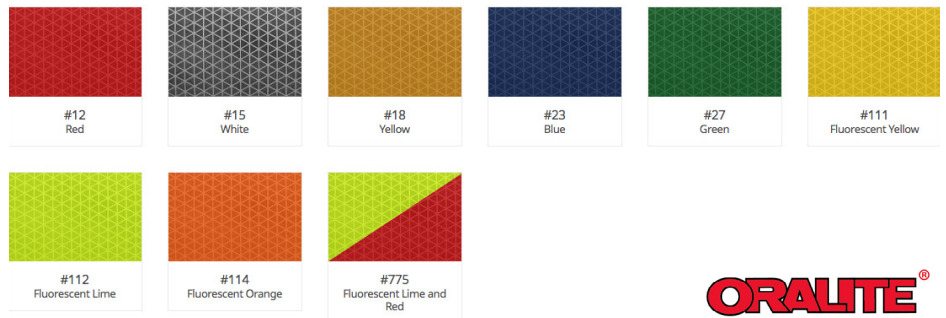

Reflectivity

Typical values for the coefficient of retroreflection for ORALITE® V98 Conformable Graphic Sheeting are shown in Table 1 when illuminated with CIE standard illuminant A and measured with the provisions of CIE No.54.2. Rotation angles of 0° and 90° are measured and averaged.

Applications

Utility vehicles that require increased visibility such as telecom, DOT, fire, EMS, and police vehicles
